

SYSTEMS, METHODS AND COMPUTER PROGRAM PRODUCTS FOR CONTINUOUS EMISSIONS MONITORING ON-LINE

Abstract

Systems, methods and computer program products provide secure access to real-time emissions data from one or more power generating plants via a web-based interface. The user provides log-in information to gain a predefined level of access based on the inputted log-in information, and may access emissions data of one or more power generating plants located remotely with respect to the user. The user can utilize any suitable computing device with a suitable browser application to access the emissions data. Accordingly, the system is highly scalable, in both users and power generating plants being monitored.
